**KEY FEATURES & FUNCTIONS**

**MULTI FAN SPEEDS**
Whether operating in either Cooling or Heating mode, the indoor fan can be set to your choice of speeds (Low, Medium, High or Auto) to achieve maximum comfort.

**X-FAN MODE**
In humid areas, this function allows indoor fan to run for a pre-determined time after unit is turned off (in cooling or dry modes) to remove additional moisture from coil.

**DRY MODE**
Indoor fan runs at low speed and turns off when desired temperature is reached.

**CONDENSATE Sentry**
Overflow of the condensate pan is prevented. The system automatically shuts off when the condensate level is too high.

**INTELLIGENT DEFROST**
This increases room comfort and saves energy by sensing the need for defrosting and eliminating unnecessary defrost cycles.

**POWER FAILURE MODE**
Your settings and parameters are stored in non-volatile memory and are retained during a power failure.

**BUILT-IN CONDENSATE LIFT PUMP**
This pumps condensate from the basepan to the drain system.

**SLEEP MODE**
You design a cycle to automatically adjust room temperatures during your sleep time, to maximize comfort and reduce utility bills.

**TURBO MODE**
When you wish to achieve the desired room temperature in the shortest possible time, Turbo Mode runs the unit at ultra high speeds for quickest results.

**TIMER MODE**
Unit can be programmed to turn ON or OFF, adjustable between one half and 24 hours.

**INTELLIGENT PRE-HEATING**
In heating mode, the system delays fan activation until the coil has warmed up, to prevent blowing uncomfortable cool air into the room.

**SELF-DIAGNOSIS**
The built-in computer uses real-time diagnostics to continuously scan for errors or malfunctions. Fault codes are shown on the unit display to facilitate troubleshooting.

**FAQs**

**Why does the fan continue to run even when the unit is not cooling or heating?**
To maintain consistent temperatures and minimize energy-loss from constant starts and stops, the fan keeps air flowing past the thermostat.

**What temperature is displayed on the wall-mounted Wired Tether Controller?**
The controller always displays desired room temperature.

**How often should I clean the air filters?**
It is recommended that air filters be cleaned every three months to maintain peak performance and enhance the life of the unit.

Not all features available on all models. Your actual system and related devices may differ from the images shown in this manual.
